EZPi Pop-Up Description(from EzPi website 09-2026)

Our PopUpPress automatically and quietly pops up after the timing cycle is complete. Factory setting is 380 degrees and 8 seconds or 390 degrees and 9 seconds, but time and temperature can easily be changed in the field. We have 5 interchangeable platens and 1 fixed platen size. All our presses are OSHA, UL, CSA, TUV SUD and CE safety certified. They have either a one or two year warranty. There are 2 versions of firmware: EzWizard and Basic Software. EzWizard software has operator error tracking and recording and will add seconds to damp or cool fabric to make sure labels adhere correctly. EzWizard Software counts and stores operator errors such as trying to apply a label before it is hot enough or raising the handle before the timing cycle is complete. These features are great for supervisor auditing. Basic firmware is a stripped down version of EzWizard software. Proudly made in the USA.

Pricing (from EzPi website 09-2026)

PopUpPress automatically and quietly pops up after the timing cycle is complete. They are 5 interchangeable platens and 1 fixed platen size. All our presses are OSHA, UL, CSA, TUV SUD and CE safety certified, more safety certifications than any other press manufactured. Proudly made in the USA.
